## **OLAYINKA OGUNRO, M.D.**

*Hand & Upper Extremity Orthopedic Surgery*

Dr. Olayinka Ogunro is considered a foremost expert at the Hand & Upper Extremity Center. "Hand and upper-extremity disorders are the most common afflictions known to man," he says. "This is due to the fact that we use our hands for everything, from work to simple eating. During this process, they are subjected to enormous workloads, stresses, strains, and injuries. Therefore, it's not surprising that we often have complaints of pain in our hands, ranging from pinched nerves (carpal tunnel) and inflammatory disorders to arthritis and cysts."

Dr. Ogunro is board certified in orthopedic surgery and certified in hand surgery. He has more than two decades of experience treating hand and upper-extremity issues. He is a proponent of early treatment in order to keep the problem from progressing and causing more pain. This philosophy enables him to see patients in a timely manner. "Early diagnosis and treatment are key factors in my practice," he says. "My goal is to get my patients back to work and on with their lives as soon as possible." Dr. Ogunro is a Fellow of the American Academy of Orthopedic Surgery and American College of Surgeons and a member of the American Society of Surgery of the Hand.
